

CLAIMS

[1] Electronic circuit wiring laid so as to surround a main circuit formed on a board in order to protect the main circuit from static electricity and laid so as to include a cross region partially crossing other wiring via an insulation film, comprising:

a start point terminal,

an end point terminal arranged on the start point terminal side via the cross region, and

a resistor element,

the resistor element being connected to the start point terminal side with respect to the cross region.

[2] Electronic circuit wiring as set forth in claim 1, wherein the end point terminal is a terminal having a discharge effect with respect to the start point terminal.

[3] Electronic circuit wiring as set forth in claim 2, wherein the end point terminal is connected to a power line having a predetermined potential.

[4] Electronic circuit wiring as set forth in claim 3, wherein the end point terminal is grounded.

[5] A display device, comprising:

an effective display region formed on a board, and

electronic circuit wiring laid so as to surround the effective display region in order to protect the effective display region from static electricity and laid so as to

include a cross region partially crossing the other wiring
via an insulation film, wherein

the electronic circuit wiring includes

a start point terminal,

5 an end point terminal arranged on the start point
terminal side via the cross region, and

a resistor element,

the resistor element being connected to the start
point terminal side with respect to the cross region.

10 [6] A display device as set forth in claim 5, wherein the
end point terminal is a terminal having a discharge effect
with respect to the start point terminal.

[7] A display device as set forth in claim 6, wherein the
end point terminal is connected to a power line having a
15 predetermined potential.

[8] A display device as set forth in claim 7, wherein the
end point terminal is grounded.
